Setting up USB Autoplay on Dreamoc XL2

On Dreamoc XL2 displays with the Samsung PE46C screen (year 2014 ->), we are using the built-in USB AutoPlay option in the screen to play and loop.

On a USB stick created a folder with the following name:

MagicInfoSlide

Important!: M, I, S must be in CAPITALS, the rest of the letters in lowercase.

Save the movies on the USB key in the folder MagicInfoSlide. They will be played in alphabetical order and will play in a loop. If there is only one movie, there may be a short black clip when the movie loops. This can be solved by putting the same movie on the USB plug twice with different names.

To activate the AutoPlay feature do the following:

• Insert the USB key in the display

• Turn on the display

• Press the button MagicInfo Lite on the remote control

• Press OK on the menu "MagicInfo Lite Player"

• Select USB Device AutoPlay and press OK

USB AutoPlay is now activated and will now always play movies from the USB connector at power on.
